

Quick Cup M300

Catalogue NO.: See Box Label

Please read all instructions before use.

ntended Us

The Precision DX Quick Cup M300 are competitive binding, lateral flow immunochromatographic assays for qualitative and simultaneous detection of Amphetamine, Oxazepam, Cocaine, Marijuana, Methamphetamine, Morphine, Oxycodone, Secobarbital, Buprenorphine, Methylenedioxy-methamphetamine, Phencyclidine, Methadone, EDDP, Nortriptyline and d-Propoxyphene in human urine at the cutoff concentrations of:

Drug (Identifier)	Cut-off leve
Amphetamine(AMP)	1000 ng/mL
Barbiturates (BAR)	300 ng/mL
Buprenorphine(BUP)	10 ng/mL
Benzodiazepines(BZO)	300 ng/mL
Cocaine(COC)	300 ng/mL
Methadone metabolite(EDDP)	300ng/ml
Ecstasy(MDMA)	500 ng/mL
Methamphetamine(MET)	1000 ng/mL
Morphine(MOR)	300 ng/mL
Methadone(MTD)	300 ng/mL
Oxycodone(OXY)	100 ng/mL
Phencyclidine(PCP)	25 ng/mL
Propoxyphene (PPX)	300 ng/mL
Notriptyline (TCA)	1000 ng/mL
Marijuana(THC)	50 ng/mL
Consider of the Description DV Outstanding	M200

Configuration of the Precision DX Quick Cup M300 can consist of any combination of the above listed drug analytes.

The test may yield positive results for the prescription drugs Buprenorphine, Nortriptyline, Oxazepam, Secobarbital, Propoxyphene and Oxycodone when taken at or above prescribed doses. It is not intended to distinguish between prescription use or abuse of these drugs. Clinical consideration and professional judgment should be exercised with any drug of abuse test result, particularly when the preliminary result is positive. The test provides only preliminary test results. A more specific alternative chemical method must be used in order to obtain a confirmed analytical result. GC/MS or LC/MS is the preferred confirmatory method.

For in vitro diagnostic use only

What are the Precision DX Quick Cup M300?

The Precision DX Quick Cup M300 are drug-screening tests that will give you a result for the presence of abuse in human urine. During testing, a urine sample moves upward on the test strip. A drug-positive urine sample will not produce a colored line in the specified test line area of the strip. A drug-negative urine sample will produce a colored line in the test line area. A colored line will always show in the control line area.

Contents of the Ki

- One Test Device
- · Shipping bag
- · Labeled Tube for shipping sample
- Instructions for Use
 - Mailing box (Prepaid)
 - Urine collection cup

Not included in package

· Watch, timer or clock

RECAUTIONS

- Do not use after the expiration date.
 The device should remain in the sealed pouch until use.
- Do not re-use the test.

STORAG

- Store between 39.2°F and 86°F.
- DO NOT FREEZE.
- Keep away from direct sunlight, moisture and heat

URINE COLLECTION

Collect urine specimen in the provided test cup. Urine collected at any time of the day may be used.

PROCEDURE

- 1. Remove the Quick Cup from the sealed pouch and use it within the first hour after opening
- 2. Collect urine specimen in the provided cup.
- 3. Screw the cap onto the cup and immediately start the timer

Reading Result:

4. The result should be read at 5 minutes

PRELIMINARY POSITIVE: Only one colored band appears, in the control region (C). No apparent colored band appears in the test region (T). NEGATIVE: Two colored bands appear on the membrane. One band appears in the control region (C) and another band appears in the test region (T). NEGATIVE: Two colored bands appear on the membrane. One band appears in the control region (C) and another band appears in the test region (T). NEGATIVE: Two colored bands appears in the test region (T).

UNDERSTANDING THE TEST RESULTS

A positive result does not mean a person took illegal drugs. A negative result does not mean a person did not take illegal drugs. There are many factors that affect the test. Certain drug tests are more accurate than others.

IMPORTANT: The results from the test are preliminary. The sample must be tested by a lab to confirm the result. Refer to the Confirmation Testing part of this insert.

1. What Is A False Positive Test?

A false positive test result means the drug is not present but shows as detected by the device. The most common causes for a false positive test are cross reactants. Certain food and medicines, diet plan drugs and nutritional supplements may cause a false positive result with this product.

What Is A False Negative Test?

A false negative test means the drug is present but is not detected by the device. If the sample is diluted, or the sample is contaminated that may cause a false negative result.

LIMITATIONS

- · This test is for human urine only. Do NOT use this device to test any other fluids.
- Bleach or baking powder, in urine samples may produce incorrect results. If contamination is suspected, repeat the test with another urine sample.
- The test does not distinguish between drugs of abuse and certain medications.

FREQUENTLY ASKED QUESTIONS

What does the Precision DX Quick Cup M300 do?

These tests indicate if one or more prescription or illegal drugs are present in urine.

The testing is done in two steps. First, you do a quick at-home test. Second, if the test suggests that drugs may be present, you send the sample to a laboratory for additional testing.

2. What is "cut-off level"?

The cut-off level is the specified concentration of a drug in a urine sample. Above that concentration the test is called positive, and below that concentration it is called negative.

What are drugs of abuse?

Drugs of abuse are illegal or prescription medicines that are taken for a non-medical purpose, including taking the medication for longer than your doctor prescribed it for or for a purpose

other than what the doctor prescribed it for.

4. Common Street Names for the Drugs to be detected?

Drug	Common Street Names
Amphetamine (AMP)	Speed, Jelly Beans or Super Jellies , Hearts, Uppers, Pick
/implictulinile (/iivii)	me ups or Wake me ups, Wake ups, Get ups, Boot ups,
	Sparkles
Secobarbital(BAR)	Amytal, Downers, Nembutal, Phenobarbital, Reds, Red
	Birds, Red devils, Seconal, Tuninal, Yellowjackets
Oxazepam (BZO)	Benzos, Downers, Nerve Pills, Tranks
Cocaine (COC)	Blow, C, candy, coke, do a line, freeze, girl, happy dust,
	Mama coca, mojo, monster, nose, pimp, shot, smoking
	gun, snow, sugar, sweet stuff, and white powder.
Methamphetamine (MET)	Speed, Ice, Chalk, Meth, Crystal, Crank, Fire, Glass
Methylenedioxymethamphetamine	Ecstasy, E, X, XTC, Adam, Clarity, Lover's Speed
(MDMA)	
Buprenorphine(BUP)	Bupe, Subbies, Temmies
Morphine (MOR)	Aunt Hazel, big H, black pearl, brown sugar, capital H,
	charley, china white, dope, good horse, H, hard stuff, hero,
	heroina, little boy, mud, perfect high, smack, stuff and tar.
Methadone (MTD)	Amidone, Dolophine, Methadose
Phencyclidine (PCP)	Angel dust, belladonna, black whack, CJ, cliffhanger,
	crystal joint, Detroit pink, elephant tranquilizer, hog,
	magic, Peter Pan, sheets, soma, TAC, trank, white horizon
	and zoom.
Notriptyline (TCA)	Pamelor
	420, Aunt Mary, baby, bobby, boom, chira, chronic, ditch,
Marijuana (THC)	ganja, grass, greens, hash, herb, Mary Jane, nigra, Pot,
	reefer, rip, root, skunk, stack, torch, weed and zambi.
Oxycodone (OXY)	OC, Ocycotton, OX, and Kicker
Propoxyphene (PPX)	Darvon

5. How accurate is the test?

The tests are sensitive to drugs and accurate. These tests, however, are not as accurate as lab tests. In some cases, certain foods and drugs may cause false positives as well as false negatives for those who use drug-testing kits.

6. If the test results are negative, can the conclusion be that the urine is free of drugs?

This means that if the sample was collected properly and the test was performed according to the directions, either the urine sample is free of the drugs tested for, or the drug levels were below the detection limit of this test.

7. Does a preliminary positive screen test mean that you have found of abuse?

This means that the test has reacted with something in the sample and the sample must be sent to the lab for a more accurate test.

8. What should I do, if the lab test confirms a positive result?

If you have received a confirmed positive result, please consult with our staff on a proper course of action. We will help you identify counselors who can help you. It is important that you remain calm and do not react in a negative way to the situation. If you do not believe the test result, please consult with your physician. They will have your background medical history and be able to provide you with detailed information on both the test and the meaning of the result.

9. How long can drugs be detected in the body with a urine drug test?

Drug	Minimum	Maximum
	detection time	detection time
Amphetamine (AMP)	2-7 hours	1-2 days
Secobarbital(BAR)	2-4 hours	1-4 days
Oxazepam (BZO)	2-7 hours	1-2 days
Cocaine (COC)	1-4 hours	2-4 days
Methamphetamine (MET)	2-7 hours	2-4 days

Methylenedioxymethamphetamine (MDMA)	2-7 hours	2-4 days
Buprenorphine(BUP)	4 hours	1-3 days
Morphine (MOP)	2 hours	2-3 days
Methadone (MTD)	3-8 hours	1-3 days
Phencyclidine (PCP)	4-6 hours	7-14days
Notriptyline (TCA)	8-12hours	2-7 days
Marijuana (THC)	2 hours	Up to 5+ days
Oxycodone(OXY)	4 hours	1-3 days
Propoxyphene (PPX)	2~4 hours	1-4 days
Methadone metabolite (EDDP)	2 hours	2 to 6 days

CONFIRMATION TESTING

- · Write Identification Number on the label.
- · Open the Labeled Vial and carefully pour the urine specimens from the urine cup into the Labeled Vial. Fill the vial to about two thirds (2/3) full and tightly close the cap.
- Please fill out name, return address, and cell phone number on Mailing Box.
- · Place labeled vial in shipping bag and seal the bag.
- Place the sealed Shipping bag in the Mailing Box.
- Mail the box using any US Postal Service.
- · Contact the lab if you do not get the result in 5 days.

PERFORMANCE CHARACTERISTICS

The accuracy of the test was confirmed by testing 80 clinical urine specimens in parallel with LC-MS. The results are shown below. The test is accurate at least 98 percent.

Tes	t	Drug-free	Low Negative (<50% the cutoff conc)	Near Cutoff Negative (Between <50% below up to the cutoff conc)	Near Cutoff Positive (Between the cutoff and 50% above cutoff conc)	High Positive (>50% above the cutoff conc)

C. Precision
This study was performed 2 runs/day over 25 days. Three operators tested 450 samples. All samples were randomly marked. The results are given below.

D. Interference
Over 100 commonly used medications were tested. It found that they have no influence on the test.

Acetaminophen	β-Estradiol	Oxalic acid
Acetophenetidin	Erythromycin	Oxolinic acid
N-Acetylprocainamide	Fenoprofen	Oxymetazolin
Acetylsalicylic acid	Furosemide	Papaverine
Albumin	Gentisic acid	Penicillin G

Aminopyrine	Hemoglobin	Perphenazine
Amoxicillin	Hydralazine	Phenelzine
Ampicillin	Hydrochlorothiazide	Prednisone
Apomorphine	Hydrocortisone	(±)-Propranolol
Ascorbic acid	O-Hydroxyhippuric	Pseudoephedrine
Aspartame	3-Hydroxytyramine	Quinine
Atropine	Ibuprofen	Ranitidine
Benzilic acid	Isoproterenol	Salicylic acid
Benzoic acid	Isoxsuprine	Serotonin (5- Hydroxytyramine)
Bilirubin	Ketamine	Sulfamethazine
Chloral hydrate	Ketoprofen	Sulindac
Chloramphenicol	Labetalol	Tetrahydrocortisone 3-(β-Dglucuronide)
Chlorothiazide	Loperamide	Tetrahydrocortisone 3-acetate
Chlorpromazine	Meperidine	Tetrahydrozoline
Cholesterol	Meprobamate	Thiamine
Clonidine	Methoxyphenamine	Thioridazine
Cortisone	Nalidixic acid	Triamterene
(-)-Cotinine	Naloxone	Trifluoperazine
Creatinine	Naltrexone	Trimethoprim
Deoxycorticosterone	Naproxen	DL-Tryptophan
Dextromethorphan	Niacinamide	Tyramine
Diclofenac	Nifedipine	DL-Tyrosine
Diflunisal	Norethindrone	Uric acid
Digoxin	Noscapine	Verapamil
Diphenhydramine	(±)-Octopamine	Zomepirac
Ecgonine methyl ester		

E. Lay User Study
A study was done at three sites with 310 people. They had different educations and skills. Their ages are from 18 to over 50. Samples were prepared at seven different concentrations. For nearly all samples tested, 90 percent or more were correct.
